

**AMENDMENTS TO THE SPECIFICATION**

*Please replace Paragraph [0018] with the following paragraph rewritten in amendment format, with strikethrough to indicate deletion and underlining to indicate addition:*

[0018] therefore, becomes  $m\lambda = (\lambda + \Delta\lambda) / \Delta\lambda$ ,

*Please replace Paragraph [0020] with the following paragraph rewritten in amendment format, with strikethrough to indicate deletion and underlining to indicate addition:*

[0020] Since multiplication of  $2nd$  and  $\Delta(1/\lambda)$  is 1 (one), if, in the experiment, a relationship function between the reflectivity intensity and  $\Delta(1/\lambda)$  can be obtained, an FFT function with respect the  $2nd$  corresponding to transform factor of  $\Delta(1/\lambda)$  by taking the FFT wholly.

*Please replace Paragraph [0026] with the following paragraph rewritten in amendment format, with strikethrough to indicate deletion and underlining to indicate addition:*

$$[0026] \text{FFT}\{\Delta(1/\lambda)\} = \text{FFT} \left\{ g \left( \Delta \left( \frac{1}{\lambda} \right) \right) \right\} = \int g \left( \Delta \left( \frac{1}{\lambda} \right) \right) e^{-2\pi i \left( \Delta \left( \frac{1}{\lambda} \right) \right) 2nd} d(2nd) = h(2nd).$$

*Please replace Paragraph [0059] with the following paragraph rewritten in amendment format, with strikethrough to indicate deletion and underlining to indicate addition:*

$$[0059] 2n(\lambda)d + 2\Delta n \lambda d = m\lambda + m\Delta\lambda - \lambda - \Delta\lambda$$

*Please replace Paragraph [0061] with the following paragraph rewritten in amendment format, with strikethrough to indicate deletion and underlining to indicate addition:*

[0061]  $m = (2\Delta nd / \Delta \lambda) + (\lambda + \Delta \lambda) / \Delta \lambda \Rightarrow$  if substituting the first equation, then

*Please replace Paragraph [0064] with the following paragraph rewritten in amendment format, with strikethrough to indicate deletion and underlining to indicate addition:*

[0064]  $(2\lambda^2 / \Delta \lambda)((n(\lambda)\Delta \lambda - \lambda \Delta \underline{n}) / \lambda^2) \neq (\lambda + \Delta \lambda) \lambda / \Delta \lambda$
